

Geometry

Welcome!

My name is Shelley Stockton and I am excited to be teaching Geometry this year.

This class will fulfill 1 credit for Math.

The only pre-requisite for this class is Algebra 1.

In this class we will be studying lines, planes, angles, circles, lots about triangles, every quadrilateral known to man, Pythagorean Theorem, proofs and so much more. If you aren't sure what some of those items are, don't stress.....that is why you are taking this class. Geometry is a different kind of math class. It allows us to study math in a new and very applicable way.

In addition to the text, I will be reading to you from the book, Flatland: A Romance of Many Dimensions, by Edwin A. Abbott. Please **do not** purchase this book.

Cost: \$200

Supplies for this Class

We will be using the Math U See Textbook. You will need to purchase the **Student Pack only** (ISBN 978-1-60826-036-2). You are welcome to purchase the textbook, but it is not necessary. The Student Pack comes with the practice workbook and the test booklet.

You will also need a compass, protractor, and ruler. I recommend a geometry set like this one. You do not have to get this exact set and please do not spend a lot of money on one.

One last thing.....you will also need a sharp pencil and a good attitude. I promise that you will learn much in my classroom with those two items! I look forward to meeting all of you.
