

# Geometry

1 Math Credit

Cost: \$200

Prerequisite: Algebra I

Hi everyone!

My name is Hannah Dee (Mrs. Dee), and I will be teaching Geometry this year. The only prerequisite for this course is **Algebra I**. We will be using the **Math U See textbook**, and you will need to purchase the **Student Pack** which includes the Student Workbook and Test Booklet (**ISBN 978-1-60826-036-2**). You are welcome to purchase the textbook as well, but it is not necessary. You will also need a **compass, protractor, and ruler**. You can find all of these items in a geometry set like the one pictured below.

Geometry is a discipline of mathematics that involves the study of points, lines, planes, circles, triangles, and other geometric figures. You will learn how to make measurements of these figures, find their areas and volumes, learn about the rules governing the properties of these figures, and learn about the practical applications of these measurements and properties.
